

Project Design Phase
Problem – Solution Fit Template

Date	02 October 2026
Team ID	SWTID-2026-8568
Project Name	Auto-Ticket Classification Using Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	CS 1. CUSTOMER SEGMENT(S) • Students & teachers: raise IT support tickets for everyday school IT problems. • School IT helpdesk staff: review and triage every incoming ticket. • Non-technical callers who describe the symptom but do not know the right category.	CC 6. CUSTOMER CONSTRAINTS • Small IT team with limited time to read and classify each ticket. • Callers should only need to enter Caller Name and Short Description. • Solution must be no-code, easy to maintain and run on the existing ServiceNow instance. • Classification must stay consistent as ticket volume grows.	AS 5. AVAILABLE SOLUTIONS • Manual triage: IT staff read each ticket and pick Category/Subcategory. Pro: human judgement. Con: slow, error-prone, not scalable. • Caller picks category: Pro: no staff effort. Con: users guess wrong or skip it. • Phone / walk-in requests: Pro: personal. Con: untracked, no consistent record.	Explore AS, differentiate
Focus on J&P, tap into BE, understand RC	J&P 2. JOBS-TO-BE-DONE / PROBLEMS • Report an issue quickly: WiFi, projector, password/login or a slow computer. • Get the ticket routed under the correct Category and Subcategory. • IT staff must identify the issue type, select the category and subcategory, and inform the caller that a ticket was created. • Doing this by hand is time-consuming, error-prone and does not scale with daily request volume.	RC 9. PROBLEM ROOT CAUSE • Ticket classification is entirely manual; no rule evaluates what the caller wrote. • Callers do not know the helpdesk's category structure, so free-text descriptions are left unclassified. • Request volume keeps rising, but staff effort per ticket stays the same. • Different staff may categorise the same issue differently.	BE 7. BEHAVIOUR • Callers type a short free-text description (e.g. 'WiFi not working in Lab 2') with their name. • They expect IT to sort out the category and follow up. • IT staff open each ticket, read it, set category/subcategory, then notify the caller. • Repeated follow-ups when tickets are mis-categorised or delayed.	Focus on J&P, tap into BE, understand RC
Identify strong TR & EM	TR 3. TRIGGERS • WiFi drops or a projector fails just before a class. • A student or teacher is locked out of their account or forgets a password. • A computer becomes slow or hangs during work. • A growing backlog of unclassified tickets for the IT team. EM 4. EMOTIONS: BEFORE / AFTER • Before: callers feel frustrated and unsure how to describe the issue; staff feel overloaded by repetitive triage. • After: callers feel confident and in control; staff feel relieved and can focus on resolving issues.	SL 10. YOUR SOLUTION • Flow Designer automation triggers when a new ticket is submitted and scans the Short Description for keywords. • WiFi → Category: Network / Subcategory: WiFi • Projector → Category: Hardware / Subcategory: Projector • Password / Login → Category: Access / Subcategory: Forgot Password • Slow / Hanging → Category: Performance / Subcategory: Slow Computer • The caller is informed that the ticket was created. • Result: consistent classification, no human error, less manual effort, and a fully no-code solution that is easy to maintain and scale.	CH 8. CHANNELS of BEHAVIOUR 8.1 ONLINE • ServiceNow ticket form / service portal. • Email notification confirming that the ticket was created. 8.2 OFFLINE • Walking up to the IT desk or lab assistant. • Telling a teacher or staff member verbally who then raises the ticket.	Extract online & offline CH of BE
