

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	02 October 2026
Team ID	SWTID-2026-8568
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in creative thinking that leads to problem solving. For the project **Auto Ticket Classification using Flow Designer**, the team explores different ways to reduce manual ticket classification, improve routing accuracy, and automate repetitive ServiceNow support activities. Ideas are first generated freely and are then grouped and prioritized based on their importance and feasibility.

Use this template to identify the ticket-management problem, generate possible automation ideas, group similar solutions, and prioritize the ideas that can be implemented effectively using ServiceNow Flow Designer.

Reference: ServiceNow Flow Designer concepts — triggers, conditions, actions and reusable flows.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

 Brainstorm & idea prioritization Use this template to identify the problem and generate automation ideas. 10 minutes to prepare 1 hour to collaborate 2-8 people recommended	 Before you collaborate Write down what you know about the current ticket process. Team reflection How are tickets classified today? Set the goal What should automation improve? Prepare inputs Which ticket fields can be used?	 Define your problem statement Focus the brainstorm on a clear ticket-classification problem. Problem statement Manual classification delays routing and creates inconsistency.  Key rules of brainstorming • Stay on topic • Defer judgement • Go for volume • Encourage automation ideas • Listen to others • Keep ideas simple
---	---	--

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm

Write down ideas that can solve the ticket classification problem.

Automation	Classification	Notification	Analytics
Record trigger	Condition rules	Keyword check	Category mapper
Auto assignment	Auto category	Priority logic	Fallback path
		Worknote	Escalation
		Accuracy report	Dashboard
Integration	AI Extension	Testing	Security
Email tickets	Serviceportal	NLP model	Confidence score
		Test cases	Flow execution
		Rules	Access checks
External tools	IntegrationHub	Human review	Learning data
		Error handling	Validation
		Audit trail	Controlled updates

Group Ideas

Group similar ideas into solution areas.

- 1. Ticket Detection**
Record trigger + new/updated ticket
- 2. Classification**
Keywords + category + conditions
- 3. Routing**
Assignment group + priority
- 4. Communication**
Notifications + work notes
- 5. Improvement**
Analytics + AI/NLP extension

Step-3: Idea Prioritization

Prioritize the ideas based on their **Importance** to the ticket-management problem and **Feasibility** within the ServiceNow environment. Ideas in the high-importance/high-feasibility area can be selected first for the proof of concept.

Selected idea: Build a ServiceNow Flow Designer flow that detects a new ticket, evaluates defined classification conditions, automatically updates the ticket category/priority and routes it to the appropriate assignment group, followed by a notification.
