

Functional & Performance Testing Template

Model Performance Test

Date	02 October 2026
Team ID	SWTID-2026-8568
Project Name	Auto-Ticket Classification using Flow Designer (ServiceNow)
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Caller Name Input Validation	Create a new incident. Enter a valid caller name, then try submitting with the Caller field empty.	Valid caller accepted; error shown when the mandatory Caller field is empty.	Valid caller name was accepted. Submitting with the Caller field empty showed a mandatory field error.	Pass
FT-02	Short Description Input Validation	Enter a valid short description, then try submitting with it blank.	Valid text accepted; error shown when Short Description is blank.	Valid short description was accepted. Blank short description was blocked with a mandatory field error.	Pass
FT-03	WiFi Keyword Classification	Create a ticket with short description "WiFi not working in lab" and submit.	Flow triggers; Category = Network and Subcategory = WiFi.	Flow triggered on submit. Category set to Network and Subcategory set to WiFi.	Pass
FT-04	Projector Keyword Classification	Create a ticket with short description "Projector not displaying in class" and submit.	Category = Hardware and Subcategory = Projector.	Flow triggered on submit. Category set to Hardware and Subcategory set to Projector.	Pass
FT-05	Password / Login Keyword Classification	Create tickets with "Forgot password" and "Unable to login" and submit each.	Category = Access and Subcategory = Forgot Password for both.	Both tickets were classified with Category Access and Subcategory Forgot Password.	Pass
FT-06	Slow / Hanging Keyword Classification	Create tickets with "Computer is slow" and "System hanging" and submit each.	Category = Performance and Subcategory = Slow Computer for both.	Both tickets were classified with Category Performance and Subcategory Slow Computer.	Pass
FT-07	Keyword Case Sensitivity	Create tickets using "WIFI", "wifi" and "WiFi" in the short description.	All variants are classified identically as Network / WiFi.	WIFI, wifi and WiFi were all classified as Network / WiFi.	Pass

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-08	No Keyword Match (Negative Case)	Create a ticket with short description "Need a new chair" (no predefined keyword).	Ticket is created without error; Category/Subcategory remain unchanged and flow does not fail.	Ticket was created without error. Category and Subcategory stayed empty and the flow completed without failure.	Pass
FT-09	Flow Trigger & Execution Status	After creating a ticket, open Flow Designer > Executions and check the run for that ticket.	Flow runs automatically on ticket creation and shows status Completed with no errors.	Flow ran automatically on ticket creation. Execution status showed Completed with no errors.	Pass
FT-10	Caller Notification	Submit a new ticket and check the caller's mailbox / Email Logs (System Logs > Emails).	Caller receives notification that the ticket has been created.	Caller received the ticket creation notification and the email appeared in Email Logs.	Pass
FT-11	Access Control (Security)	Log in as a user without the required role and try to view or modify another user's ticket.	Access denied; only authorized users can view or modify ticket data.	Unauthorized user was denied access. Only users with the required role could view or modify tickets.	Pass
PT-01	Classification Response Time	Create a ticket and time it from submission until Category and Subcategory are populated.	Classification completes in under 3 seconds.	Category and Subcategory were populated within 3 seconds of submission.	Pass
PT-02	Concurrent Ticket Creation	Create multiple tickets (e.g., 10–20) at the same time with different keywords.	All tickets are classified correctly and the flow does not slow down or fail.	All concurrently created tickets were classified correctly with no noticeable slowdown.	Pass
PT-03	Bulk Ticket Load Test	Import or insert a large batch of tickets (e.g., 100) via Import Set or script.	All tickets are processed and classified smoothly without errors or timeouts.	All tickets in the bulk batch were processed and classified without errors or timeouts.	Pass
